SUMMARY

Five years of frontend development: from building UI in vanilla JavaScript for an early-stage LegalTech SaaS to modernizing a legacy WordPress/PHP corporate portal with Vue 3 and TypeScript – 70 of 90 pages migrated so far, without disrupting the live site. There's a particular satisfaction in dropping a Vue 3 component into a stack that's never seen one and watching it not break anything. Alongside this, I'm on a client assignment at Hewlett Packard Enterprise, working in enterprise production environments under strict change management.

Focused on growing as a Vue developer: going deeper into Vue 3 and Nuxt 4 rather than spreading across frameworks. Looking for a product team with room to grow technically.

EXPERIENCE

Frontend Developer 2023.04 – Present
OWL Technology Co., Ltd.
Japan | Remote

Development and maintenance of the company's corporate portal and external site.

- Incrementally migrating a corporate portal (75 pages) and external site (15 pages) from WordPress PHP templates to Vue 3 without disrupting the live site, progressively converting existing JavaScript to TypeScript: components embedded in WP templates, Vite bundles loaded via wp_enqueue_script, server data passed as JSON in data attributes. 70 of 90 pages migrated to date.
- Replaced 10 duplicated PHP templates (forms, search, dashboard) with 3 reusable Vue components using composables and Pinia, cutting new form delivery from 3 days to 1.
- Built admin-issued 24-hour access links to restricted pages with server-side expiry validation and notifications; implemented server-side access control for 3 roles.
- Reduced LCP on the home and product pages from 3.2s to 2.5s (Lighthouse, mobile) via WebP, responsive srcset/sizes and hero image preloading.
- Migrated the portal and site to a new host and domain with zero downtime and zero data loss: parallel deployment, database restore with table prefix change, 301 redirects, traffic cutover after verification.
- Backend: built a custom WordPress plugin for the employee "My Page" (Vue 3 UI: leave balance, health check-up status, Drive links); designed the database schema, DB event handlers and cron jobs for new-user processing and automated data updates.

Key skills: *Vue 3, TypeScript, JavaScript, Pinia, Vite, WordPress/PHP 8, MySQL*

Client assignment: **Hewlett Packard Enterprise** – Security Patch Team Lead (dispatched, hybrid) 2024.11 – Present

- Led a team of 3 in security patching across production, DR and test environments (RHEL, Windows Server, AWS) under strict change-management and documentation standards.
- Prepared change requests, procedure documents and status reports, and coordinated approvals with Japanese and international team members in Japanese and English.

Key skills: *RHEL 8.6, Windows Server, AWS, Bash, SQL, Oracle*

Frontend Engineer 2021.07 – 2023.04

Legl

UK | Remote

Frontend development for an early-stage LegalTech SaaS product.

- Built core UI components (forms, modals, tabs, sliders) from scratch in vanilla JavaScript, without an existing design system.
- Refactored legacy markup and CSS to improve mobile responsiveness.
- Contributed UI/UX ideas in team discussions.

Key skills: *HTML, CSS, JavaScript (vanilla), Responsive design*

PERSONAL PROJECTS

- **IRON (**iron-bygray.netlify.app**)** *– Vue 3, JavaScript, Vite, Pinia, Supabase, Vitest*
  A mobile-first workout tracker with fully custom training programs, live set/rep/weight logging, supersets, drag-and-drop reordering, a rest timer, and a workout journal with editable history. Auth and data are backed by Supabase with row-level security.
- **TaskFlow (**taskflow-bygray.netlify.app**)** *– Vue 3, TypeScript, Pinia, Supabase, Vitest*
  A task management app with a kanban board, drag-and-drop, subtasks, tags and search, and a persisted dark/light theme. Auth and data are backed by Supabase with row-level security.
- **Portfolio (**portfolio-bygray.netlify.app**)** *– Vue 3, Nuxt 4, JavaScript*
  An earlier collection of personal Vue 3/Nuxt 4 experiments: SPA builds, API integrations, and UI/UX practice pieces.

TECHNICAL SKILLS

- **Frontend (professional):** Vue 3 (Composition API, composables), TypeScript, JavaScript (ES6+), Pinia, HTML5/CSS3, Responsive layout, Component architecture, Forms & validation, Incremental migration of legacy WordPress/PHP to Vue
- **Performance:** Core Web Vitals (LCP), Lighthouse, image optimization (WebP, srcset)
- **Frontend (personal projects):** Nuxt 4, SPA, Supabase (auth, row-level security), unit & component testing (Vitest, Vue Test Utils, coverage)
- **Tools:** Git/GitHub, npm, Vite, REST API, jQuery, Netlify
- **Backend & Infra:** PHP 8, WordPress (AJAX handlers, nonces), MySQL, Oracle, Linux (RHEL), Bash, AWS (infra/ops)

SOFT SKILLS

- **Cross-cultural communication:** daily work with Japanese and international teams
- **Comfortable with legacy codebases:** incremental modernization without breaking production
- **Technical documentation:** procedure documents, change requests, reports (JP/EN)
- **Self-directed learning:** Vue 3, TypeScript, Nuxt and testing learned through practice

EDUCATION

Specialist Degree (5-year program): Physics & Informatics 2009 - 2014

Birsk Branch of Bashkir State University, Russia

CERTIFICATIONS

HTML5 Professional Certification, Level 1 & 2

LanguageCert ESOL Achiever B2, High Pass

PHP8 Certification

LPIC Level 1

Oracle Master Bronze DBA

JLPT N1

LANGUAGES

- English (B2), Japanese (JLPT N1), Russian (Native)
